Education

Carnegie Mellon University - School of Computer Science **Pittsburgh, PA**

B.S. Human-Computer Interaction with Concentration in Computer Graphics Expected May 2028

GPA: 3.55

Relevant Coursework*:* Interaction Design Fundamentals; Design of Artificial Intelligence Products; User-Centered Research & Evaluation

Experience

Software Engineering Intern – Quicksilver Labs **May 2026 - August 2026**

- Translated a database-mapping review project brief into a specification document, clarifying requirements with the project lead and team.
- Designed and implemented six interface prototypes over two weeks to support accepting, rejecting, and flagging algorithm-generated database mappings.
- Examined comparable workflows, designed interfaces in Figma, and used AI-assisted implementation to create working prototypes; incorporated feedback from team reviews every other day, culminating in a heatmap interface.

Research Assistant - Human Computer Interaction Institute **August 2026**

- Evaluated three agents against human-agent interaction design principles, probing their behavior through conversations and documenting responses for each evaluation.

Projects

AI in Student Study Workflows — User Research **February 2026 - May 2026**

Worked with a team to explore our research question about AI-use in students

- Conducted two contextual interviews within a team study of ten participants investigating students' use of AI for answers and support with independent reasoning
- Synthesized interview findings with teammates through interpretation sessions and affinity diagramming; findings suggested participants often sought AI assistance when other resources were insufficient and time pressure increased
- Contributed to a final report recommending the design and testing of a study tool that would give students greater control over how assistance was delivered

Adaptive UI Redesign - Canvas QuickClick **February 2026**

A redesign of the company "Canvas" UI to adapt to each user with simple AI

- Investigated mobile navigation pain points through firsthand use and conversations with students, contributing to a team course concept that surfaced frequently accessed courses and materials
- Assessed preliminary development costs and financial feasibility to support the team's product pitch

Scotty3D - Computer Graphics Course Project **August 2026 - Present**

A 3D modeling software similar to Blender where users can create models for renders and other uses

- Implemented rasterization, depth testing, texture filtering, and mesh operations, developing technical knowledge relevant to interactive graphics tools

Activities

ScottyLabs Events Committee Member **May 2026 - Present**

- Planned logistics and set judges for each track in the ScottyLabs NOVA Hackathon for 400+ participants

Technical Skills

Design and Research: Figma, Miro, Interface Prototyping, Contextual Interviews, Affinity Diagramming, Workflow Analysis, Design Critique, Human-Centered Design, AGILE Workflow, AI-Assisted Design

Development: Python, JavaScript, HTML/CSS, React, C++, Unity, Git, ReactJS
