Education

Carnegie Mellon University - School of Computer Science **Pittsburgh, PA**

B.S. Human-Computer Interaction with Concentration in Computer Graphics Expected May 2028

GPA: 3.55

Relevant Coursework*:* Design of Artificial Intelligence Products; User-Centered Research and Evaluation; Interaction Design Fundamentals

Experience

Software Engineering Intern – Quicksilver Labs **May 2026 - August 2026**

- Translated a database-mapping review project brief into a specification document, clarifying requirements with the project lead and team
- Prioritized research and features based on team feedback, deciding what to include or exclude while developing six interface prototypes over two weeks
- Presented prototypes at team reviews every other day and incorporated feedback between meetings, culminating in a heatmap interface for reviewing algorithm-generated database mappings
- Owned a newsletter-review tool from requirements clarification through implementation and deployment, incorporating periodic supervisor feedback; the tool ingested and scored newsletters and exported reviewed digests to Word for the supervisor's firm-wide distribution
- Evaluated two Time-Series Foundation Models using orbital data; visualized forecast errors and assessed limitations to inform a decision not to use the models in the main project

Research Assistant - Human-Computer Interaction Institute — Carnegie Mellon University **August 2026**

- Evaluated three agents against existing interaction design principles, recording adherence judgments, written justifications, and supporting screenshots in a structured spreadsheet

Leadership and Coordination

ScottyLabs Events Committee Member **May 2026 - Present**

- Contacted 15 prospective judges and recruited five for the NOVA Hackathon, an event serving more than 400 participants
- Serve as the liaison between the five recruited judges and ScottyLabs, communicating event details and coordinating correspondence

Selected Projects

Canvas QuickClick — Adaptive Navigation Concept **February 2026**

- Investigated mobile navigation pain points through firsthand use and conversations with students, contributing to a team course concept that surfaced frequently accessed courses and materials
- Assessed preliminary development costs and financial feasibility to support the team's product pitch

AI in Student Study Workflows — Course Research Project **February 2026 - May 2026**

- Wrote an interview guide for a ten-participant team study; recruited and conducted contextual interviews with two participants
- Synthesized findings with teammates through interpretation sessions and affinity diagramming, contributing to a report recommending a study tool that would give students greater control over how assistance was delivered

Skills

Product and Coordination: Requirements clarification, Specification writing, Feature prioritization, Project scoping, Stakeholder communication, Workflow analysis

Research and Design: Contextual interviews, Qualitative synthesis, Prototype iteration, Preliminary financial feasibility analysis

Tools and Development: Figma, Miro, Git, Python, JavaScript, HTML/CSS, ReactJS
