Education

Carnegie Mellon University - School of Computer Science **Pittsburgh, PA**

B.S. Human-Computer Interaction with Concentration in Computer Graphics Expected May 2028

GPA: 3.55

***Relevant Coursework**:* User-Centered Research and Evaluation; Interaction Design Fundamentals; Design of Artificial Intelligence Products

Research Experience

Research Assistant - Human Computer Interaction Institute **August 2026**

- Evaluated three agents against existing human-agent interaction design principles through conversations designed to probe their behavior.
- Recorded adherence judgments in a structured evaluation spreadsheet, documenting justifications and supporting screenshots for each principle assessed.

AI in Student Study Workflows — Course Research Project **February 2026 - May 2026**

- Wrote an interview guide for a team study of ten participants investigating students' use of AI for direct answers and support with independent reasoning
- Recruited and conducted contextual interviews with two participants, contributing evidence about study workflows and circumstances prompting AI use
- Synthesized interview findings with teammates through interpretation sessions and affinity diagramming; findings suggested participants often sought AI assistance when other resources were insufficient and time pressure increased
- Contributed to a final report recommending the design and testing of a study tool that would give students greater control over how assistance was delivered

Industry Experience

Software Engineering Intern – Quicksilver Labs **May 2026 - August 2026**

- Translated a database-mapping review project brief into a specification document, clarifying requirements with the project lead and team
- Examined comparable workflows and developed six interface prototypes over two weeks; incorporated feedback from team reviews every other day, culminating in a heatmap interface
- Evaluated two Time-Series Foundation Models using orbital data, visualizing forecast errors and examining limitations to inform a decision not to use the models in the main project

Select Projects

Canvas QuickClick — Adaptive Navigation Concept **February 2026**

- Investigated mobile navigation pain points through firsthand use and conversations with students, contributing to a team course concept that surfaced frequently accessed courses and materials

Activities

ScottyLabs Events Committee Member **May 2026 - Present**

- Planned logistics and set judges for each track in the ScottyLabs NOVA Hackathon for 400+ participants

Skills

Research Methods: Interview guide development, Participant recruitment, Contextual interviews, Qualitative synthesis, Interpretation sessions, Affinity diagramming, Workflow analysis, Evaluation against design principles

Design and Collaboration: Figma, Miro, interface prototyping, design critique

Technical: Python, JavaScript, HTML/CSS, ReactJS, Git
